

Formation – at the leading edge of rapid prototyping

THE BALANCE between reducing product introduction cycles and controlling risk is the conflicting dilemma confronting manufacturers today. How can you reach product launch without incurring the costs and delays associated with normal manufacturing techniques?

A formidable team of engineers Formation can provide the solution to this dilemma through their comprehensive range of Rapid Prototyping (RP) skills. Formation has built a formidable team of engineers

IMPACT RESISTANT RESIN

with one consistent objective. We aim to be the UK's pre-eminent RP bureau through the development of strong customer links and technical excellence.

Our integrated in-house CAD/CAM facilities utilise the latest CAD modelling systems, data

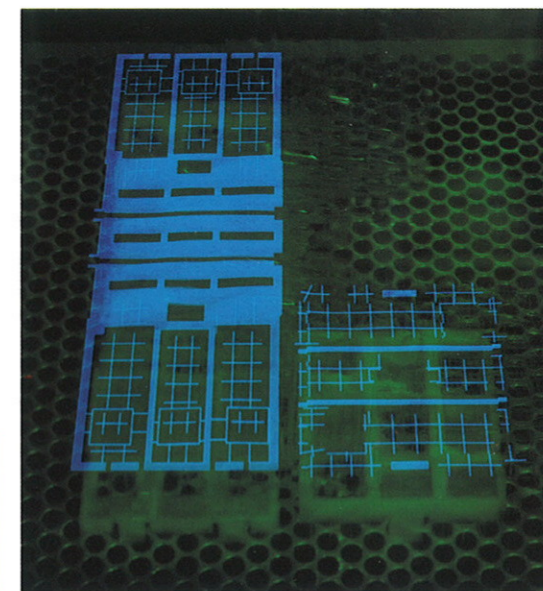

SPINNAKER HOUSE

exchange technology and 3D Systems SLA equipment.

Prototypes produced in a fraction of the time

The relentless pressure to reduce 'time to market' for new products has necessitated radical changes in all engineering disciplines. The application of RP techniques builds upon these changes and enables prototypes to be produced in a fraction of the time associated with traditional machining and model making methods. Consequently, as is often the case, producing prototypes is on the critical path, the use of RP can directly reduce time to market.

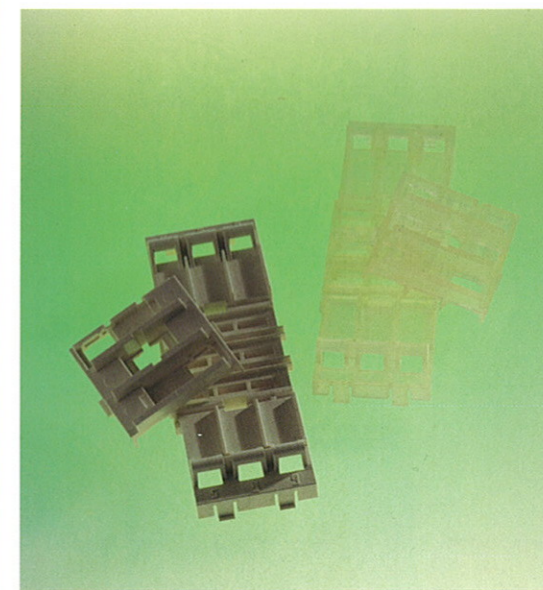

Formation believe that the business case for using RP is irrefutable and that virtually every industry can benefit from its use. RP can be of benefit whatever your product or process.
